THE GLOBAL PARTNERSHIP  
ON ARTIFICIAL INTELLIGENCE

11-12 NOVEMBER 2021 PARIS

14h-15h

# AI & PANDEMICS WORKING GROUP

---

**Alison Cohen**

Mila - Quebec Artificial Intelligence Institute, Canada

**Michael O'Sullivan**

University of Auckland, New Zealand

**Eliot Layne**

MC Gill University

**Paul Suetens**

KU Leuven, Belgium/European Union

**Alice Oh**

Korea Advanced Institute of Science and Technology,  
South Korea

**Samuel Curtis**

AI Policy Researcher and Project Manager  
THE FUTURE SOCIETY

## **The AI & Pandemic Response Working Group's mandate**

The Working Group will “foster and support the responsible development and use of AI-enabled solutions to fight COVID-19 and other future pandemics. With less than 1% vaccination in low-income countries, and G7 Leaders setting a target to develop diagnostics, therapeutics and vaccines within 100 days in a future crisis, we know that our mandate remains urgent and vital. We are pleased to present on two projects that can help GPAI and the wider international community on these challenges.”

## AI for public-domain drug discovery

**Alice Oh**

Co-Lead GPAI's Drug Discovery Project Associate  
Professor of Computer Science at the Korea  
Advanced Institute of Science and  
Technology School of Computing

**Yoshua Bengio**

Co-Lead GPAI's Drug Discovery Project  
Founder and Scientific Director, Mila

## AI-powered immediate response to pandemics

**Paul Suetens**

Co-Chair AI & Pandemic response  
Co-Lead GPAI's AI immediate response to pandemics  
Professor Emeritus  
KU Leven

**Michael Justin O'Sullivan**

Co-Lead GPAI's AI immediate response to  
pandemics University Lecturer & Researcher in  
Operations Research, Analytics & AI, University of  
Auckland

PARIS SUMMIT 2021

# **AI for Public Good Drug Discovery**

Recommendations for Policy Development

GPAI

PARIS SUMMIT 2021

*“Necessity  
is the mother  
of invention”*

Plato

## INFECTIOUS DISEASE CRISIS

- Covid-19 highlights a global vulnerability to infectious diseases
- Threat is growing, making proactive action critical
- Ex. Antimicrobial Resistant Pathogens

*“Antimicrobial resistance is one of the greatest challenges to global public health today, and the problem is increasing”*

World Health Organization

## CURRENT DRUG DEVELOPMENT ECOSYSTEM

### Concentrated Influence

*Dependent on big pharma to bring drugs to market*

### Stifling Innovation

*Limited sharing of data, slowing innovation and increasing its cost*

### Skewed Priorities

*Pursuit of profits rather than health needs*

### Vulnerable to Existential Risks

*Ecosystem not conducive to fighting the health concerns of the future*

## GOVERNMENT INVOLVEMENT NEEDED

- To steer health innovation towards public needs, government intervention is critical
- Intervention should catalyze the game changing potential of AI

Democratize drug  
development

Create scientific  
breakthroughs

Optimize the drug  
discovery and  
development process

Making drugs more affordable and health threats surmountable

## RECOMMENDATIONS

Stimulate R&D in  
under-researched &  
highly needed  
innovations for public  
health

Implement Open  
Science and Open Data  
policies as public  
funding conditions

Incentivize the use of AI  
throughout drug  
discovery pipeline

# GLOBAL SOLUTIONS TO A GLOBAL CHALLENGE

- Global health concerns transcend borders and necessitate a coordinated response
- Global data sharing will affect:
  - Efficiency of innovation
  - Type of drugs being developed
  - Accessibility of said drugs
  - Quality of care provided to minority populations
- A more equitable, efficient and effective approach to global health

## NEXT STEPS

Consultation

Implementation

# Our Recommendations

## An Overview

In order to stimulate the ecosystem for AI-driven drug discovery, governments should:

1. Invest in academic research in the field of AI-driven drug discovery, specifically to address health concerns that are not sufficiently interesting for the markets;
2. Incentivize AI capacity building across the drug discovery and development ecosystem;
3. Establish innovation procurement programs to stimulate industrial uptake of academic research;
4. Create financial incentives that move successful research to clinical trials when market incentives are not sufficient;
5. Pursue international collaboration to align research, innovation policy, technology access and capacity building;
6. Leverage an international organization appropriate to assist in managing international coordination on these goals.
